

Creamy Coconut Soy Container Wax

Creamy Coconut Soy container candle wax is a complex blend of soy and coconut wax designed to give a creamy off-white appearance, provide excellent fragrance throw, exhibit an “even-ness” of burn and wax consumption, and give good container adhesion for candles.

Physical Properties	Specifications	ASTM Method
Melting Point (°F)	125-130	
Brookfield Viscosity @190 (°F)		
Congealing Point (°F)	116-126	ASTM D-938
Needle Penetration @ 77 (°F)	65-85 dmm	ASTM D-1321
Color, Visual	White to slightly off white	
Appearance	Creamy, soft	
Fragrance Load	8-12%	

Manufacturer’s Recommended Directions/How to Use:

Melt wax to 200° F, add fragrance and stir. Pour right away. This wax normally provides an excellent scent throw at 8% with most fragrance oils, though you can load to 12% for fragrance oils. Also works well with essential oils – follow instructions from your fragrance oil manufacturer for fragrance load.

With blends containing coconut wax, proper wicking is essential, or the wax can burn too hot and not as clean. You will generally need to wick down 1-2 sizes from what you would use with a soy candle. Coconut wax properly wicked may still leave a thin layer of wax on the sides of your containers.

It is always best to try different temperatures to see what temperature works best for you as there are so many different situations such as glass size, temperature of work area, fragrance percentage, etc.

FDA Status

This product conforms to the requirements of FDA Regulations found at 21 CFR 7.13, and is not adulterated or misbranded within the meaning of the Federal Food, Drug, and Cosmetic Act, nor is an article which may not, under the provisions of Section 409 of the Act, be introduced into interstate commerce. The certification is given in accordance with USDA/FSIS regulations found at 9 CFR 301, 317, 320, and 381. All of the material conforms to the FDA requirements laid down in Paragraph 21 CFR
